

Access the emerging markets universe of opportunities

Investing in emerging markets is a way for investors to access positive demographics, a rising middle class driving consumer demand and higher long term growth potential relative to developed markets. It also allows investors to diversify into countries that are underrepresented in portfolios.

A smart beta approach:

Value

Momentum

Low size

Quality

Emerging markets are a significant and growing contributor to global GDP.

Emerging markets are under represented in portfolios and are home to a number of current and future industry leaders in their field.

Portfolios that have included an exposure to emerging markets have historically benefitted from periods of strong economic growth. We believe emerging markets will continue to provide investors with benefits over the long term due to the potential for strong economic growth, their favourable demographics and growing middle class.

Our approach to investing in emerging markets provides access to companies included on the basis of these four factors:

Value: The foundation of value investing is the idea that cheap assets have historically outperformed expensive assets, on average, over the long-term. Value is pro-cyclical, meaning it has tended to perform well in periods of economic expansion.

Momentum: The momentum factor is the historical tendency of outperforming stocks to continue performing well in the near-term. Momentum has tended to benefit from continued trends in the market and economy.

Low Size: The size factor is the historical tendency of small company stocks to outperform stocks with larger market capitalisations. The size factor is pro-cyclical, meaning it has tended to perform well in periods of economic expansion.

Quality: Quality aims to reflect the performance of companies with durable business models and sustainable competitive advantages.

What is factor investing?

- “Factor” refers to any characteristic of a group of securities that is important in explaining their returns and risk.
- Factor investing, the most common smart beta approach, provides exposure to long term performance factors, identified by academic research and supported by empirical evidence.
- Factors are particularly pronounced in emerging markets. EMKT provides access to factor-driven performance in a rules-based and transparent ETF.

Benefits of EMKT’s approach

- Provides efficient and controlled exposure to targeted factors.
- This strategy aims to help investors achieve active-like returns in emerging market equities for passive fees via a single trade on ASX.
- Exposure to the world’s fastest developing markets, including China, Taiwan, South Korea and India.

In emerging markets a multi-factor approach mitigates the cyclical nature of individual factors, eliminating the need for factor timing.

Important notice

VanEck Investments Limited (ACN 146 596 116 AFSL 416755) (VanEck) is the issuer and responsible entity of all VanEck exchange traded funds (Funds) trading on the ASX. This information is general in nature and not personal advice, it does not take into account any person's financial objectives, situation or needs. You should consider whether or not an investment in any Fund is appropriate for you. Investments in a Fund involve risks associated with financial markets. These risks vary depending on a Fund's investment objective. Refer to the applicable product disclosure statement (PDS) and target market determination (TMD) available at vaneck.com.au for more details. Investment returns and capital are not guaranteed.

The MSCI Emerging Markets Index (“MSCI EMI”) is shown for comparison purposes as it is the widely recognised benchmark used to measure the performance of emerging markets large- and mid-cap companies, weighted by market capitalisation. EMKT's index measures the performance of emerging markets companies selected on the basis of their exposure to value, momentum, low size and quality factors, while maintaining a total risk profile similar to that of the MSCI EMI, at rebalance. EMKT's index has fewer companies and different country and industry allocations than MSCI EMI. Click [here](#) for more details.
