JULY 2026

VanEck Core+ Diversified High Growth Active ETF

ASX Code: VHGR

Investment objective

VHGR aims to provide investment returns before fees and other costs that is consistent with a high growth risk profile by investing across different asset classes. VHGR aims to outperform its Benchmark after fees and other costs.

Benchmark

Benchmark is Australian CPI + 5% per annum.

Performance as at 31 July 2026

	1 month (%)	3 months (%)	6 months (%)	1 year (%)	Since VHGR inception (%)
Price return	-0.48	1.57	-	-	2.04
Income return	0.00	5.03	-	-	5.05
Total return	-0.48	6.60	-	-	7.09

The table above shows past performance of the Fund from 28 April 2026. Results are calculated to the last business day of the month and assume immediate reinvestment of distributions. Fund results are net of management fees and costs, but before brokerage fees or bid/ask spreads incurred when investors buy/sell on the ASX. Returns for periods longer than one year are annualised. Past performance is not indicative of current or future performance which may be lower or higher.

Key benefits

A complete core portfolio

Instant access to an intelligently designed core diversified portfolio spanning regions and asset classes all in a single ASX trade.

A smarter foundation

Powered by VanEck's high pedigree of intelligently designed ETFs, targeting real world investor outcomes for long-term wealth.

High growth

A portfolio of growth assets across geographies and strategies. Suited to investors with a long-term investment horizon, with a risk tolerance that seeks to maximise capital growth while accepting a higher degree of market variability.

Key risks

An investment in the ETF carries risks associated with: financial markets generally, asset allocation risks, underlying fund risks, investment management risks, ASX trading time differences, industry sectors, foreign currency, country or sector concentration, political, regulatory and tax risks, and fund operations. See the PDS and TMD for more details.

Market commentary

International equities as represented by MSCI World ex Australia Index returned -0.92% in July. Information technology fell 5.37% as investors rotated out of semiconductors and back into mega-cap technology and software names. A flare-up in hostilities between the US and Iran pushed oil prices as high as US\$90 a barrel, making energy the strongest performing sector (+11.12%). VLUE outperformed, supported by its Japanese industrials as the yen fell to its weakest level against the US dollar in around 39 years, while QUAL underperformed, held back by its underweight to energy.

Emerging market equities fell by 4.39%. India and Brazil outperformed on supportive domestic developments, while North Asian markets lagged as semiconductor stocks saw a sentiment-driven correction despite solid underlying fundamentals.

Australian equities posted solid gains, with the S&P/ASX 200 returning +2.26%. A steady unemployment rate of 4.4% and persistently elevated inflation prompted the market to firm up expectations for another rate hike this year. This contributed to large caps leading the market, with the S&P/ASX 20 returning +3.70%, while small caps lagged, with the S&P/ASX Small Ordinaries falling 3.17%.

Fixed income was weaker as renewed US-Iran hostilities brought inflation risks back into focus. Yields rose across the curve while credit spreads modestly widened. This weighed on duration-sensitive strategies and higher-volatility credit exposures. Higher-quality floating-rate strategies were more resilient as elevated running yields and strong carry helped offset wider spreads. The Bloomberg Global-Aggregate Hedged AUD Index returned -0.94%, while the Bloomberg AusBond Composite 0+ Yr Index returned -0.43%.

Portfolio performance update

In July, the VanEck Core+ Diversified High Growth Active ETF (ASX: VHGR) returned -0.48%. International equities were the largest drag on fund performance. International small companies (QSML) was the heaviest detractor, returning -4.82% and subtracting 0.43%, followed by emerging markets (EMKT) and international quality (QUAL) which returned -4.42% and -2.01% respectively. Partially offsetting these losses, Australian equities held up as MVW was the largest positive contributor, returning 1.11% and adding 0.39%. International value bucked the broader international equity weakness, with VLUE returning 1.25% and outperforming the MSCI World ex Australia Index. Property supported returns, with MVA (+3.04%) and REIT (+2.54%) adding 0.09% and 0.08% respectively. NUGG subtracted 0.07% as the gold price eased.
