The table above shows past performance of the ETF from 14 October 2013. Index performance shown prior to 21 December 2012 is simulated based on the current index methodology. Results are calculated to the last business day of the month and assume immediate reinvestment of distributions. ETF results are net of management fees and costs, but before brokerage fees or bid/ask spreads incurred when investors buy/sell on the ASX. Returns for periods longer than one year are annualised. Past performance is not a reliable indicator of current or future performance which may be lower or higher. The S&P/ASX 200 A-REIT Index is shown for comparison purposes as it is the widely recognised benchmark used to measure the performance of the largest A-REITs in Australia, from the S&P/ASX 200, weighted by market capitalisation. MVA's index measures the performance of the largest and most liquid ASX-listed A-REITs, with a maximum weight of 10% in each security at rebalance. MVA's index has fewer A-REITs and different property sector allocations than the S&P/ASX 200 A-REIT Index.
