# VanEck Vectors MSCI International Sustainable Equity ETF

### Fund Description

The VanEck Vectors MSCI International Sustainable Equity ETF (ESGI) invests in a diversified portfolio of sustainable international companies listed on exchanges in developed markets around the world (ex Australia) with the aim of providing investment returns, before fees and other costs, which track the performance of the MSCI World ex Australia ex Fossil Fuel Select SRI and Low Carbon Capped Index.

The Index aims to represent the performance of a diversified portfolio of international companies that have high Environmental, Social and Governance (ESG) performance by applying the following negative and positive screens:

1. Exclusion of companies that own any fossil fuel reserves or derive revenue from mining thermal coal or from oil and gas related activities.
2. Exclusion of companies whose business activities are not socially responsible investments (SRI). Those companies whose businesses are involved in or exposed to the following activities are excluded:
  - alcohol
  - gambling
  - tobacco
  - military weapons
  - civilian firearms
  - nuclear power
  - adult entertainment
  - genetically modified organisms.
3. Inclusion of high ESG performers. MSCI ESG Research data is then used to include only the leading ESG performers in each GICS sector; and
4. Exclusion of high carbon emitters.

The Index aims to achieve diversification by capping the maximum weight assigned to each security, thereby avoiding concentration risk.

An investment in the ETF carries risks associated with: ASX trading time differences, financial markets generally, individual company management, industry sectors, foreign currency, country or sector concentration, political, regulatory and tax risks, fund operations and tracking an index. See the PDS for details.

Source: FactSet. Price/Earnings Ratio is the weighted average of the last closing price of each portfolio security divided by the last twelve months' earnings of the security. Price/Book Ratio is the weighted average of the last closing price of portfolio security divided by the book value of the security. Market Capitalisation of a publicly traded security is calculated by multiplying the security's last closing price by the total number of its shares outstanding. Dividend Yield is the weighted harmonic average of each portfolio security's distributed income during the prior twelve months before management costs.
